chemical compatibility for special products <u>click here</u> or send email or contact postally.)

- Black Nitrile Gasket: Black Nitrile Rubber (NBR) is resistant to petroleum Oils, Aromatic Hydrocarbons, Mineral Oils, Vegetable Oils and many Acids. Black Nitrile has excellent sealing properties.
- White Square / Round EPDM Gasket: EPDM is a multi-purpose sealing material with good and excellent chemical properties. EPDM is FDA compliant. As plug gasket, it is not recommended for application involving petroleum derivatives.
- Square PE Gasket: Square PE gasket due to nature of the Polythelene (PE) have limited heat resistance.
- Round PE Gasket: Square PE gasket due to nature of the Polythelene (PE) have limited heat resistance.
- Square Poly Irradiated gasket: Improved heat resistance and improved chemical resistance due to cross-linking by electron beam radiation.
- Round Poly Irradiated gasket: Improved heat resistance and improved chemical resistance due to cross-linking by electron beam radiation.
- Viton Gasket: Viton is a fluo-elastomer that resists a variety of corrosive fluids at elevated temperature while retaining its mechanical properties.
- Teflon Gasket: Although Teflon has excellent chemical resistance. However, its sealing capability is very poor! As such Teflon is not suitable as flange gasket. Due to its poor sealinh properties Teflon is not recommended as plug gasket. Testing under field conditions will be required to determine the appropriate closing torque.
